SPS/SPD series

POWER PLAZA CO., LTD

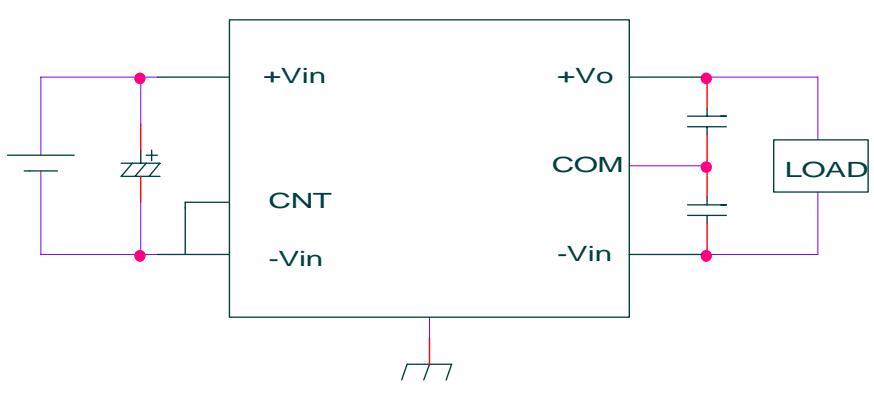

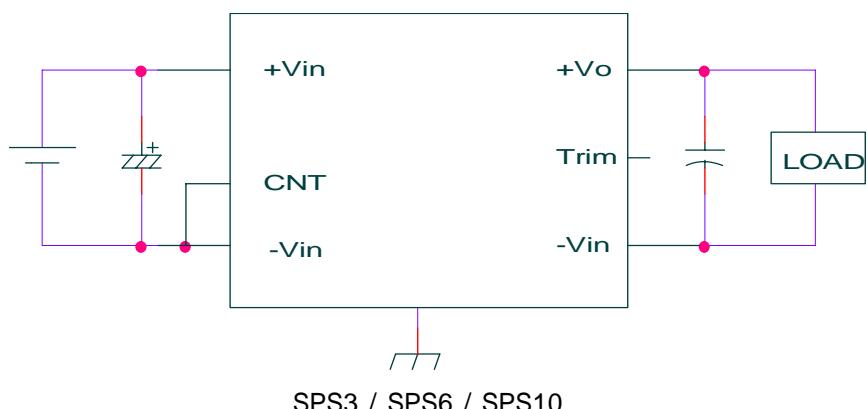

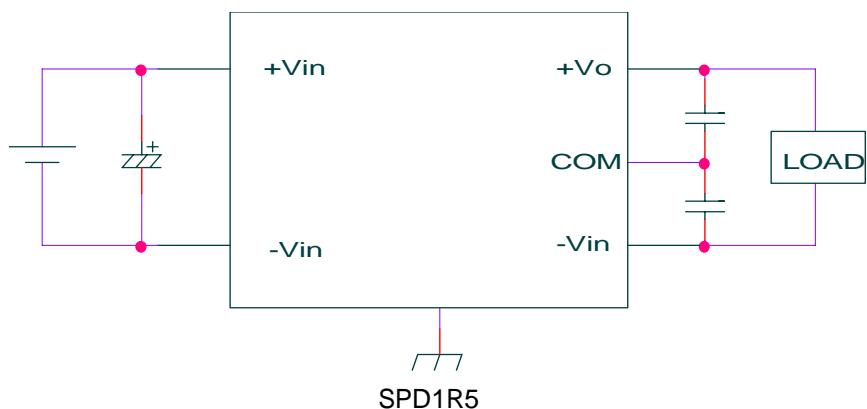

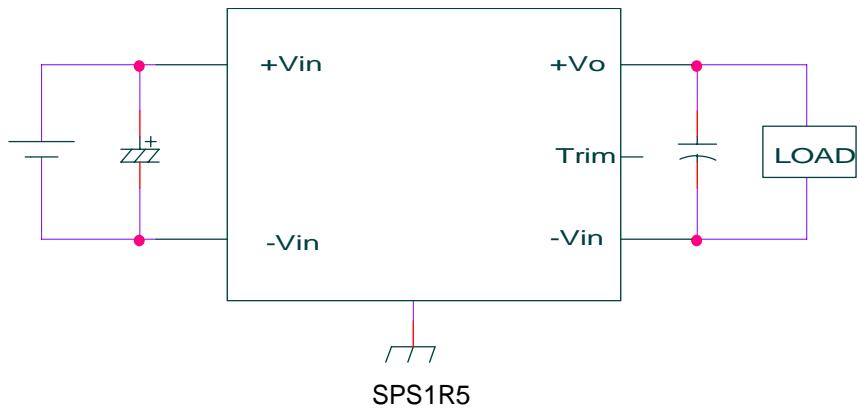

1. Block Diagram

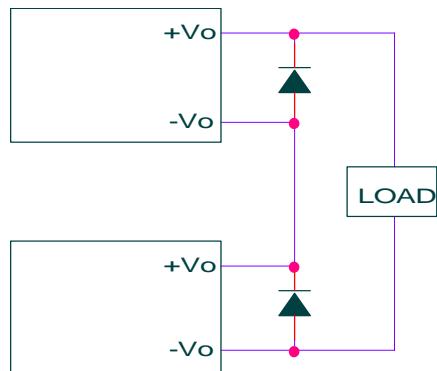

2. Basic connection

3. Series / Parallel Operation

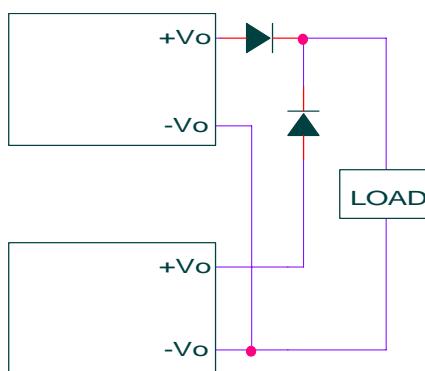

1) Series Operation

Choose a diode in accordance with voltage, current , power dissipation and heat radiation

- Voltage : $V > V_o$
- Current : Sufficiently large current of output current
- Use a schottky or fast recovery diode which has a low V_F

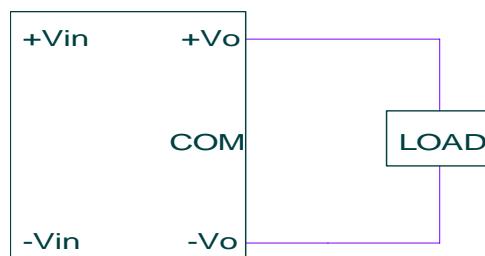

2) Parallel Operation

Load current should be less than rated output current of converter

3) SPD Series Application Operation

SPD series can be used as a single output.
+12V/ -12V dual output can be used as a +24V single output.

4. Input Fuse

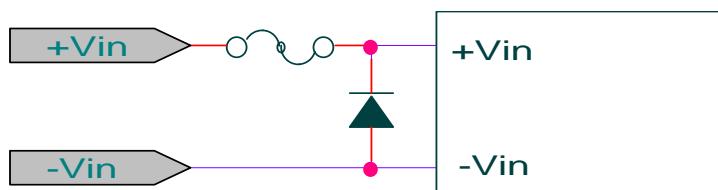

In order to comply with safety requirements, SPS series has a fuse built in.

	5V	12V	24V	48V
SPS1R5	2A	1A	0.75A	0.75A
SPS3	3A	2.5A	1A	1A
SPS6	5A	2.5A	2A	1.5A
SPS10	6A	4A	2.5A	2A

5. Input Reverse-polarity voltage protection

Input reverse voltage protection has not built in this product.

So, you can set up a circuit externally as described below if necessary

6. Input Output Filter

SPS series have an internal input filter. To minimize the ripple and noise of the input voltage, additional external capacitor is required (10uF ~ 680uF)

To reduce a output ripple and noise, external capacitor is required at the output of the device.

7. Over current protection

SPS series built in over current protection circuit which operates when the output current is over 105% of rating and automatically recovers when over current condition is removed.

If load is connected to a inductive or constant current load such as lamp or motor, output may not start up.

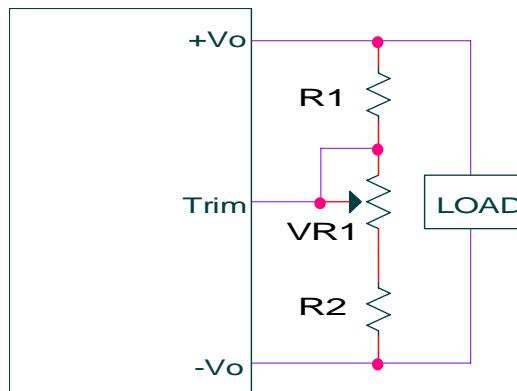

8. Over voltage protection

SPS series has not built in overvoltage protection circuit. So, you need to set up a circuit externally which can protect the over voltage if necessary.

9. Output voltage variation (Trim)

Output voltage adjusted by using trim pin within $\pm 10\%$ of output voltage.

Use of trim function can cause the output power to increase, so you should not use beyond the SPS's specified output power rating.

Trim methode

Output voltage	VR	R1	R2
3.3V	500	1k Ω	560
5V	1k Ω	1k Ω	680
12V	1k Ω	3.9k Ω	680
15V	1k Ω	5.6k Ω	750

10. Remote ON/OFF Control (CNT)

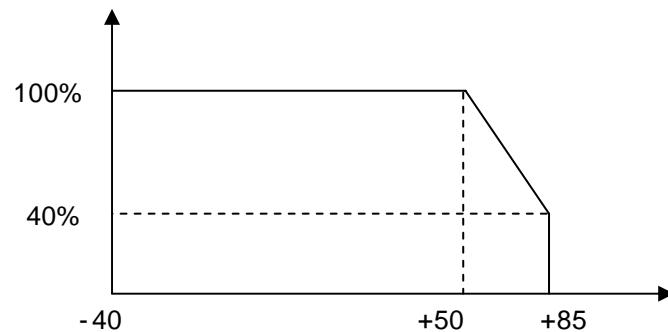

By using CNT pin you can control the output without turning the input power on or off.
If you need not this function short CNT pin to -Vin (Except 1.5W)

CNT Level for -Vin	Output
OPEN	OFF
SHORT	ON

11. Thermal consideration

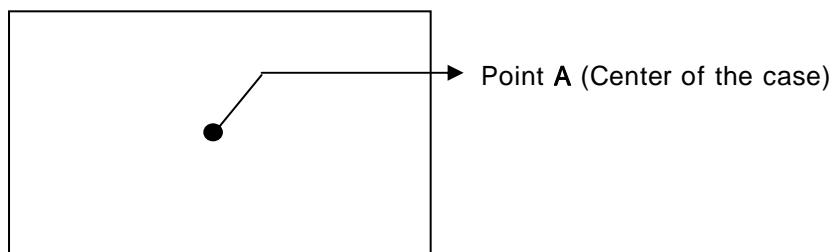

SPS series has wide operating temperature range from -40°C to +85°C.

However, it should be required enough air flow for more reliable operation. Output derating curve provide designers with a quantity of a current under the desired ambient temperature and velocity of a airflow.

If the device is installed in a system, the device's temperature of point A should be checked to ensure it does not exceed specified temperature as below.

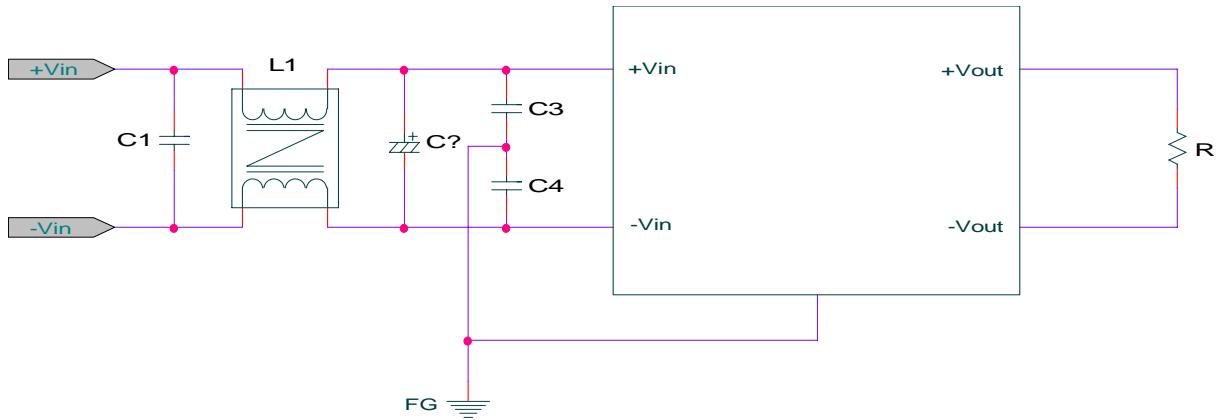

Please make sure that the ambient temperature does not exceed 85°C.

Output	1.5W	3W	6W	10W
Temp	90	90	95	100

12. EMI Characteristic (Conducted Emission)

In order to reduce conducted noise install an external input filter as shown in below.
